1. If you did not configure the delivery fees or there is a cart value that is out of range this delivery fee will be shown in the app
2. If the user is near the next delivery fee by this value in point number "9" the system will recommend to increase the basket size. Example:

3. The user can schedule his order up to this number of days if it is set to 5 the user can't schedule his order to Friday if today is Sunday
4. It shows how big is the interval if it set to 2 and the start 10 am the interval will start as follows (10am-12pm)-(12pm-2pm) and so on. Example:

5. The beginning of the day in this example the start of the day is 10am
6. The end of the day in this example it is 8 pm
7. The time in which the interval get closed, if it is set to 15 it means the user can't order in this interval less than 15 hours before the start of the interval. Example: The last time the user can order in our example is 7 pm the day before which is 15 hours before 10 am or his order will be scheduled to the intervals after (10am-12pm)
8. The same as number 7 but it is for users tagged with business
9. The minimum cart value that is eligible for this fee in our case if the user's cart value between 0-150 SAR he will pay 10 riyals as a delivery fee refer to the example in point 2

10. The maximum cart value that is eligible for this fee
